A new Standard in Winch Technology

WAVE WINCH for safe and confident operations

Ridderinkhof Wave Winch is a high dynamic escort render recover winch, that keeps the line tight during all operations and all movements of the tug. At lineforces higher than the setpoint of max lineforce, the line will veer out enough length at very high speed until the situation is safe again, without causing the line to break or become slack.

WAVE WINCH types are available for 75, 105 and 130 tons dynamic full continuous render/ recover pull. The whole range is available with electrical frequency drives or with hydraulic drives. The line force of the holding brake can be selected between 100 ton and 250 tons. The system is fully automatically, the master does not have to worry about the winch! Captains working with our wave winches stated that this will become a new standard.
