

125 YEARS OF EXPERIENCE IN CUSTOM-BUILT SEA-GOING & INLAND VESSELS

De Hoop focuses on the design and construction of specialized vessels, both for inland waterways and the open sea. The yards strength is their ability to design highly efficient ships, fit for purpose and without unnecessary additions. Designing and building a new vessel in its entirety requires a creative and innovative approach. It also requires a good knowledge of the latest developments and opportunities in the industry.

De Hoop operates from two different yards in the Netherlands: De Hoop Lobith, near Arnhem (10.5 hectares, 140 people), and De Hoop Foxhol, near Groningen (2.5 hectares, 65 people). The combined quay facilities are over 450 meters, with an

additional 200 meters readily available in the Rotterdam harbour area.

Shipyards De Hoop has a track record of designing and building a wide variety of vessels, ranging from custom-built offshore vessels (eg DSV, IMR, PSV, AHTS), specialized transport vessels (eg chemical tankers, open top container vessels) and inland passenger vessels (eg luxury cruise vessels, day passenger vessels, accommodation barges).

De Hoop has all the necessary expertise to build a complete new vessel under a single roof. The yard has an in-house department of engineering which, combined with an enormous database and practical

approach, enables De Hoop to offer high-tech, state-of-the-art designs with a high level of quality and with a very short lead time. In fact, the yard's short delivery times – from contract signing to delivery – are unmatched in the worldwide ship-building industry.

Besides engineering and building specialized vessels, there is a growing market for Shipyards De Hoop in conversions, maintenance and repair works. This service provides existing customers a long term service contract to control their total costs and assure quality during the lifecycle of their vessels.
